Scenario

Todd Dickinson is a junior studying computer science at his university. He has decided that he wants to start a software company after getting his bachelor's degree. He has coded his software application, which he thinks will attract thousands of people to use.

 As a student, Todd has not experienced building a business from the ground up. He wants to have a one-stop application that can guide him through the process of building a company. He needs to securely store his information to be able to apply for the legal document. He will use the links in the application to fill out legal paperwork for his company. He also needs to be able to apply for the funding through the application.

Todd uses the Build-A-Biz app to set up his account. When he logs in, he will be able to upload all his information on the web. He can then go through steps to set up his company entity. The interested investors will be able to see Todd's proposal and communicate through the application.

User Stories / Features

As a user, I want to log into my account and upload my documents securely.
